RENAULT APPROVES KONFORT 760R

Another prestigious acknowledgment for TEXA's line of stations for the maintenance and regeneration of air conditioning systems. In fact, Renault approved the use of KONFORT 760R for all its vehicles, with regards to both the traditional R134a gas and the recent R1234yf gas, mandatory for all the new type-approved vehicles.

The KONFORT 760R can be in fact purchased fitted for R134a or for R1234yf and eventually be converted with a specific retrofit kit optional.

To gain the approval of the famous French manufacturer, TEXA proved its high product standards, its distribution ability and assistance services, other than the extraordinary technical and design features of its charging stations.

Renault's recommendation adds to the ones already obtained by TEXA for the brands Mercedes-Benz, Hyundai, Kia, Opel, Chevrolet Europe, Vauxhall, Toyota, Subaru, Mazda and Jaguar Land Rover.

The KONFORT stations, launched in 2010 and appreciated on the market straight off, are guaranteed by eight patents and built in a very modern and fully automated plant in order to assure maximum quality and reliability.

Of particular interest is the possibility to equip KONFORT 760R with the Refrigerant Identifier Kit which avoids the risk to mix the two different gases and is able to identify counterfeit mixes immediately.

TEXA was founded in 1992 in Monastier of Treviso and is today Europe's top name in the design, production and sale of diagnostic instruments for cars, bikes, trucks, agricultural vehicles and marine engines. TEXA is present all over the world with a widespread net of dealers; it commercialises directly in Spain, France, the U.K., Germany, Poland, Russia, the United States and Japan thanks to its branches. Currently TEXA has approximately 450 employees in the world; the manpower is young (the average age is 32), 45% have a university degree and among these about 90 are engineers and specialised technicians dedicated to Research and Development.
